

The Majority of the information we know about PS comes from the transcript of Bara's disciplinary hearing, and the documents from Ana, and the bulletins we've been finding around campus. From these we've learned that PS is a secret society created in 1896 after the discovery of the parasite, which appears in a different location every 11 years, and is among other things a room. We know that the structure of PS includes Reticulites who are masked with red robes and don't speak, Rens who inspire terror and awe as personifications of mortality, Runners who deliver messages, initiates and seekers who seek to be a part of PS. We know that the sects of owl, serpents, and squirrels, are a relatively new development for PS as is large scale aggressive recruitment, which is happening this year in preparation for a momentous event prophesied for the parasite's 2017 appearance on September 17th, which may or may not involve the parasite being lost or irrevocably changed in some way. We know that the seekers will need to find objects for this event, and we know that PS is all about change and stands for dissensus.
